Convention and Exhibition Centre Health and Safety: Managing COVID-19 Challenges
Health, safety and Security experts of the International Association of Convention Centres (AIPC) and the Global Association of the Exhibition Industry (UFI) united in the AIPC-UFI Task Force created this good practice guidance in late February – early March 2020 to help members and industry at large address the recent outbreak of the COVID-19 virus.

AIPC (The International Association of Convention Centres) and UFI (The Global Association of the Exhibition Industry) are pleased to have assembled this Good Practice Guidance on COVID-19 as a resource for convention and exhibition centres now addressing the challenges associated with venue management undergoing the impacts and potential impacts of the current COVID-19 outbreak. It has been created as a collaborative project between the two organizations as a way to emphasize the importance of cooperative action in the face of such an issue and to ensure a greater degree of consistency in the advice and information being provided.

The 24 page Guide focuses on updated convention and exhibition centre health and safety policies, plans and procedures and has been assembled with the support, input and review of both AIPC and UFI members engaged in a task force assembled for this purpose and under the overall guidance of a global expert in health and security matters and incorporates both strategic and practical guidance in the form of advice, suggestions, examples and tips focusing in particular on new, updated and modified information as opposed to simply pre-existing, standard health and safety controls and crisis management plans.

The text includes many ‘live’ document links to allow additional information to be accessed directly, as well as lists of additional key industry and health authority resources that may enhance planning and tactics.

While no single resource will be able to capture the full range of information available on such a broad and constantly evolving issue, this Guide offers a solid framework for response along with related resources to make it as relevant as possible to the needs of managers. As the COVID-19 situation and corresponding impacts evolve, the amount of relevant, practical information and experiences will continue to grow and we would welcome further input that may be incorporated into future advisories.

In releasing this document both AIPC and UFI wish to acknowledge and thank the members and industry colleagues that have made it available in such a timely manner.

Aloysius Arlando AIPC President
Mary Larkin UFI President
The COVID-19 outbreak has proven impactful for the convention and exhibition trade from the outset. Organizations have taken measures to protect staff, visitors, partners and clients as well as key processes and assets around the world.

In doing so these convention and exhibition centres are demonstrating their dedication to continued top quality service and care delivery on a daily basis, even in the face of major challenges. These range from mundane requests for extra disinfection protocols and health screening efforts to crisis-level last-minute event postponements and cancellations. Many of the measures initiated in convention and exhibition centres around the world during January-early March 2020 to cope with the outbreak vary considerably from centre to centre and country to country as many are guided by different policies, principles, protocols and circumstances. Amid all this action, much is being achieved, and newly developed.

This guidance document aims to capture and offer a range of these measures, insights and ‘good’ if not necessary be some overlap between measures mentioned in these six separate categories. Further, as no two convention or exhibition centres are the same, the advisability, applicability and proportionality of measures in terms of size, scale, function and physical and cultural environment should be taken into account when considering their use. So should the legal and compliance frameworks in place in different centres: not all measures applied in one location are necessarily allowed in another. For instance, there is much difference between countries when it comes data privacy rules, the professional standing of medical staff and the certification of health and safety-related products and services.

Where documents or other resources are mentioned in the text, these should, in most cases, be directly retrievable via the ‘live’ link provided or otherwise by using an Internet search. All documents from AIPC and UFI member organizations shown, including those bearing marking ‘internal’ or ‘confidential’, are used with explicit permission for the betterment of membership and the industry.

A NOTE ON TERMINOLOGY: Readers are asked to exercise a measure of flexibility when it comes to terms used in this document in that many people use different terms for the same thing. For example: health and safety vs. public safety, measures vs. controls, large outbreak vs. pandemic, Coronavirus vs. COVID-19, and so on. Please apply this flexibility when reading the guidance.

How to Use This Guide

The information in this document is divided into six main categories:

1. POLICY & PLANS
2. PROCEDURES
3. CRISIS MANAGEMENT
4. COMMUNICATIONS
5. NEWS MONITORING
6. SELECT RESOURCES

These six categories derive from and in many cases overlap with the ‘management framework’ or ‘core policy pillars’ or ‘key principles’ or ‘key measure sets’ outlined in a number of standards, guidelines, and policy statements used by various national, international and organizational health safety bodies. They were chosen as well based on the feedback and content provided by convention and exhibition centres as to which main categories of activity they defined for themselves in addressing the virus outbreak.

Most category chapters are further subdivided into sections. It is recognized not all measures can be clearly placed in one category or another as there will by necessity be some overlap between measures mentioned in these six separate categories.

AIPC and UFI management wishes to thank the contributors as well as UFI Managing Director and CEO Kai Hattendorf and UFI Research Manager Christian Duwart for their assistance in expertise and resource engagement.

AIPC and UFI management hope that the information provided here may contribute to improved preparedness, reaction and well-being among membership and industry in the face of the current COVID-19 challenge.
A POLICY in its simplest form is a written statement outlining an organization’s position and objective on a particular issue. Convention and exhibition centres, as do many other types of organizations, standard have policies on a range of matters, though many use terms other than the word policy, including guidance, code, scheme, plan, and strategy.

A PLAN is a written document outlining an organization’s steps towards achieving the stated policy objective. It usually encompasses identification of who will lead the effort, who will perform the effort, and what the effort will consist of. In most plans, the who and the what to achieve specific effects are further defined in procedures or protocols.

The basic idea for most organizations is to have a policy, a plan for carrying it out, and a team (or task force or group or unit or crisis management team – they go by many different names) to do it, or at least lead the effort.

POLICY

1 | Adopt, use and be able to publicize a policy dealing with COVID-19 either in the form of a policy on COVID-19 specifically, or outbreaks of viral disease more generally, or, more generally still, a (flu) pandemic. Whether you call it a policy or guidance or plan or something else, make certain you have it in written form, and can communicate it. Not all convention or exhibition centres publicize it openly, or publicize it prominently, but you should be able to present it to third parties and do so openly (i.e. website) as circumstances demand. In its simplest form, it can be a general, short guidance document conveying general information. See Appendix 1 for an example from the Scottish Events Campus in Glasgow.

2 | Convention and exhibition centres that have not yet had the opportunity to finalize a policy should consider adopting one on a ‘concept’ or ‘under development’ basis, so that they have a working version in place they can then improve on. It is the total absence of one that has caused several convention and exhibition centers significant challenges in recent months. Among related policies centres are updating, often via their HR department: Travel, Working from Home, and Sickness.

3 | Good practice dictates that policy statements are usually fairly short, clearly phrased, and make reference to (or express) the precept that they are based upon. These precepts are usually national and or international health and safety authorities’ policies, and or national and or international standards.

Examples of national health authorities and their policies that are cited are:
• The UK NHS, the Chinese CDC, the US CDC, the Singapore Ministry of Health, the Mexican Secretaria de Salud, and the Dutch RIVM.

Examples of international health authorities and their policies often cited are:
• World Health Organization (WHO)
• European Centre for Disease Prevention and Control (ECDC)

Examples of international standards often cited are:
• ISO 45001: Management Systems of Organizational Health and Safety
• BS OHSAS 81001: Occupational Health and Safety Assessment Series

An example of how a convention or exhibition centre presents a clear policy but does so placing the national health authority front and center: The World Forum in The Hague.

4 | Some convention and exhibition centres choose to have a main declared policy, and then written and clearly defined policy on a number of secondary and sometimes even detail issues. As with the main policy, it is considered good practice to define if not openly declare what the secondary policies are, and what specifically they address. A simple example of a centre adopting and then openly declaring such a secondary policy is that of the Massachusetts Convention Center Authority in Boston, USA, which – in a trust-building manner - informs viewers it maintains a policy specifically on the use of disinfectants, and has people dedicated to doing this properly, demonstrating just how closely it is following national government guidance.

5 | Do not issue a policy (or other guidance or plans) that directly involves or impacts third parties without first consulting or notifying them, as this can lead to adverse reactions and confusion. Engage stakeholders appropriately, and inform and consult them as you develop your policy.

6 | For organizations that own or operate more than one convention or exhibition centre, and where a policy on dealing with COVID-19 may take on much larger dimensions, one particular strategic level document that may offer useful insight and guidance is the WHO 12 February 2020 “COVID-19 Strategic Preparedness and Response Plan – (Draft) Operational planning Guidelines to Support Country Preparedness and Response.”

AIPC & UFI: Good Practice Guidance Convention & Exhibition Centre Health & Safety | Managing Covid-19 Challenges

GOOD PRACTICE: Procedures

Increased/expanded hygiene and disinfection regime

Most venues use local and national hygiene and disinfection guidance, rules, models, and approaches. Among the more often cited international resources are:

To strengthen their health and safety monitoring capabilities, many convention and exhibition centres aside from everything else now simply increase their human staff patrols in public areas as well, on the one hand to more swiftly detect any symptoms of disease, and on the other to more swiftly and directly assist people in need, and if need be, isolate them. This is often done in the form of roving patrols by health and safety staff, or during major events, hired medical staff.

Example of best practice from the RAI in Amsterdam: a joint medical – security – fire team making the rounds during a busy, large-scale event.

PHOTO:

AIPC & UFI: Good Practice Guidance Convention & Exhibition Centre Health & Safety | Managing Covid-19 Challenges

PLANS

1. Plans as opposed to policy conveys an actual operationalization of intent, and it is for this reason that many convention and exhibition centres specifically separate the terms 'policy' from 'plan.' Plans tend to form around the ‘who,’ ‘what’ and ‘how to’ principle, defining how specific objectives should be achieved. The details are then presented inside the plan in the form of procedures or protocols, per activity. In the context of COVID-19, many convention and exhibition centres have longstanding plans of immediate use but are still augmenting and updating them.

Among the titles of plans used (many have more than one relevant plan in use alongside others) are:

- Pandemic Response Plan
- Health & Safety Plan
- Business Continuity Plan
- Continuity Activity Plan
- Crisis Management Plan
- Communications Plan

2. Many convention and exhibition centres use standard templates for health and safety plans that derive from either national or international standards, and standard steps (such as “do risk assessment first”). This standard formatting of plans, as opposed to a free–style approach, is considered good practice in that plans made in this manner can be more readily understood, shared, supported, and carried out, particularly when it comes to plans that involve emergency services/First Responders or larger and carried out, particularly when it comes to plans that can be more readily understood, shared, supported, and carried out, particularly when it comes to plans that may not be involved in carrying out particular plans, share the existence of plans for different purposes among staff to help create awareness – and in some cases, strengthen confidence. Conduct regular reviews of key COVID-19 related plans with appropriate staff.

3. Key resources cited and used by planners to draw up or refine COVID-19 related plans include:

Means to conduct increased health screening of people

Efforts to screen persons entering a convention or exhibition centre for virus symptoms and efforts to screen persons already inside can be performed in different ways, notably:

- Asking people to self-report any symptoms they see/feel;
- Having staff ask questions of people about whether they feel any symptoms;
- Having staff observe people entering/passing by looking for possible symptoms;
- Having staff perform hands-off entry area thermal camera checks on people;
- Having staff perform hands-on entry area thermal camera checks on people;
- Asking people to self-report any symptoms they see/feel;
- Having staff ask questions of people about whether they feel any symptoms;
- Having staff observe people entering/passing by looking for possible symptoms;
- Having staff perform hands-off entry area thermal camera checks on people;
- Having staff perform hands-on entry area thermal camera checks on people;
- Asking people to self-report any symptoms they see/feel;
- Having staff ask questions of people about whether they feel any symptoms;
- Having staff observe people entering/passing by looking for possible symptoms;
- Having staff perform hands-off entry area thermal camera checks on people;
- Having staff perform hands-on entry area thermal camera checks on people;
- Asking people to self-report any symptoms they see/feel;
- Having staff ask questions of people about whether they feel any symptoms;
- Having staff observe people entering/passing by looking for possible symptoms;
- Having staff perform hands-off entry area thermal camera checks on people;
- Having staff perform hands-on entry area thermal camera checks on people;
- Asking people to self-report any symptoms they see/feel;
- Having staff ask questions of people about whether they feel any symptoms;
- Having staff observe people entering/passing by looking for possible symptoms;
- Having staff perform hands-off entry area thermal camera checks on people;
- Having staff perform hands-on entry area thermal camera checks on people;

and faster. A wide range of graphics are freely available
pictures to help convey the core message(s) better

be multi-language, and supported by graphics or

in different convention and exhibition centres,

A growing number of convention and exhibition centres are preparing people to work from home, or letting them work from home part-time already. This includes facilitating people with laptops, phones, teleconference software and subscriptions, messaging services, e-learning and other tools like collaborative software to enable teams of people to work from home or otherwise remotely, efficiently.

Management should be aware that home work is regulated in different ways in different countries, and that many ownership or holding companies also have rules pertaining to working from home, and these issues must be checked before starting a formal work from home policy. This includes rules and regulations concerning:

- Safe work place
- Work hours
- Tracking and reporting work hours
- Reimbursement use of home equipment
- Reimbursement use of home communications

Traveling for work
See the following: WHO guidance “Getting the workplace ready for COVID-19.”

In addition, as concerns staff commuter travel, especially on local transit services like the bus, tram, subway/metro and rail, consider giving regular briefings to address concerns about local transit, and or posting Frequently Asked Question (FAQ) notices to convey key information. This example of good practice showing only a part of the text is from the Melbourne Convention & Exhibition Centre:

For international travel, and to help realize your Duty of Care requirements towards employee traveler, see the following: WHO guidance “Getting the workplace ready for COVID-19.”

For further reading, see the following: WHO “Home care for patients with suspected novel coronavirus (COVID-19) infection presenting with mild symptoms, and management of their contacts – interim guidance.”
3 GOOD PRACTICE: Crisis Management

1 | To manage emergencies, set up, equip, train and maintain a convention or exhibition center Crisis Management Team (CMT). This would include a Crisis Management Plan and a properly equipped, designated CMT Crisis Room.

2 | For guidance on requirements for setting up and operating a Crisis Management Team, notably the ongoing assessment of risks, see:
   - ISO 22301 Business Continuity
   - ISO 31000 Organizational Resilience
   - EU CEN/TS 17091 Crisis Management as a Strategic Capability

3 | Have the CMT develop and train on COVID-19 related scenarios starting with the leading health risks identified in risk assessments and audits. Scenarios ought to at least include:
   - Detection/report of a suspected infection at the venue (visitor, exhibitor, third party staff, etc.);
   - Off-site cases reported among staff or other stakeholders;
   - (Media) Reports about an infection that might have occurred at the venue (but is not necessarily true);
   - Urgent client requests before a major event for extra control measures;
   - Having to postpone or cancel an event on short notice; and
   - Requests from the government for urgent use of the venue for emergency purposes, for instance confiscation of a hall for quarantine, vaccination, or major public health operation support purposes.

Example of good practice: The World Forum Crisis Management team training a virus outbreak scenario in The Hague, the Netherlands.

As part of any exercises, make sure to train the logger(s) as well, as health authorities and other regulatory bodies will usually pay close attention to the steps a crisis team followed when addressing an emergency, notably to see if anything was done in flagrant violation of regulations or health and safety policy. Good, complete logging reduces the risk of authorities questioning the actions of a crisis team afterwards.

4 | Good practice as tested at the World Forum in The Hague, The Netherlands ensures that senior management is directly involved with the team and that as part of the team, the leader has enough autonomy to handle a health-related incident or crisis situation in the absence of availability or time on the part of the senior most venue manager.

5 | Consider use of specialized software to function effectively in a crisis, particularly if you have a large operation involving a lot of third parties/stakeholders. Examples of crisis management notification, reporting, communications, coordinating and task tracking software that management can use include services developed by: Fact24 (F24), Everbridge, Amika, Send Word Now, Evernote, Merlin Software CrisisSuite, Onsolve, and Clearview.

6 | Consider having staff attend crisis management training courses such as those offered by government agencies, public-private organizations and private companies.

7 | For learning and improved connectivity, look for opportunities for staff to attend or observe crisis exercises by local authorities, especially those dealing with an outbreak of disease or COVID-19.

8 | Do not underestimate how long it takes for certain COVID-19 procedures to be completed. This includes questioning and paperwork in preparation for tests, which can take from 15 to 60 minutes per person (this based on actual tests), and waiting for the results of a test, which depending on circumstances, can take from a few hours to a full day before the results are out. Uncertainty is a key factor in managing crises, and the pressure for decision-makers can rapidly mount right in this waiting period (is it or is it not a confirmed case of?). Be prepared for long periods of uncertainty in this regard.

Below an example of the kind of form professional first responders generally have to fill out when they prepare to test someone for the virus, this one used by health officials in Ontario, Canada. Finding answers to some of these questions can in and of itself be time-consuming.

![COVID-19 Virus Test Requisition Form](image)
1) Good practice experts consider it important that communications planning encompass at least the following main elements of team, plan, means and function:
• Use of a professional Communications Team, intern or external/hired, to spearhead communications efforts;
• Use of a Communications Plan around COVID-19 / the flu / pandemics to provide focus, structure, alignment, coordination and drive to all organizational communication efforts around the issue;
• Use of specified means of internal and communication, all aligned in terms of messaging and languages, to increase the effectiveness of the messaging; and
• Use of a news monitoring function to track any communication that might mention your convention or exhibition centre, other centres, your owner/mother company, or other direct stakeholders in the context of the COVID-19 outbreak.

Example of good practice (pages in Dutch): part of the COVID-19 Task Force Communications Plan of the RAI in Amsterdam, which uses a standard format to synchronize the effort with existing communications plans and capabilities, yet allows for specific issue tailoring while preparing the RAI to manage a wide range of scenario’s, rapidly. The plan covers all internal and external communications.

Also see the US CDC pages dedicated to COVID-19 and communication: https://www.cdc.gov/coronavirus/2019-ncov/coronavirus-toolkit-v3-20-february.pdf

2) A key resource used by a number of facilities to assist them in drawing up their communication plans are the special pages dedicated to this in WHO and US CDC documentation. See section 4.1 on Risk Communications of the WHO “Key planning recommendations for Mass Gatherings in the context of the current COVID-19 outbreak – interim guidance.”

An additional resource is the NHS Scotland coronavirus communications toolkit: https://www.cps.scot/media/3139/coronavirus-toolkit-v3-20-february.pdf

3) Pre-prepared communications are being advised with regards to the following:
• General statements on policy and guidance to be placed on convention or exhibition centre website;
• General briefers for own staff on new developments, including key points with which they can answer basic questions from members of the public (a “what to say” line on venue preparations, for instance;)
• General briefers for customers (often posted online on special pages as part of a convention or exhibition centre’s website, often done in the form of a Frequently Asked Questions or FAQ sheet);
• General letters and briefers for vendors, partners, local communities and other stakeholders on measures being taken;
• Notice informing staff of postponement or cancellation of an event; and
• Ready-to-use, pre-prepared statements on different scenarios for use on social media platforms.

In general, where appropriate, it is considered good practice in communications to express the fact that you as an organization are following developments closely, that you are concerned for the welfare of all who might be effected, that you are engaged with your stakeholders on the matter, and convey basic information on your preparations.

GOOD PRACTICE: Communications

Example of a briefer from a US convention centre to update staff (internal use):
Example of a letter prepared for customers and other stakeholders by the Massachusetts Convention Center Authority to keep them apprised of all the work being done by the MCCA:

Example of internal communications on cancellation of an event in Asia:

Monitoring the world around you to keep track of disease developments, public opinion, how the industry is being effected, what is being said about the issue and about you in the regular media and on social media, and altogether maintaining situational awareness has proven to have high value, at the strategic as well as the tactical and operational levels. Good practice facilities suggest the following:

1. Designate someone or some party (office unit, contractor, consultant, PR firm) as the daily news monitor, responsible for checking on news of interest at least several times a day.

Related:
- Designate set times for a news check (i.e. morning, daytime, evening);
- Check on a diversity of platforms (papers, radio, TV) and topics, i.e. general news, COVID-19 specific news, news about your city/area/centre;
- Do not forget to have a means to monitor social media;
- Have a protocol for who should be informed about what;
- Consider using news as input for daily, twice a week or weekly staff briefing;
- Use news as input for internal brief/newsletter for staff and or vendors/partners.

It is important that, in cooperation with the Communications staff, you monitor for news that concerns your own facility, or neighborhood. In some cases, convention and exhibition centres have found themselves the sole focus of major articles without their knowledge, or cooperation, or consent.

Example of a local TV news story prepared in collaboration with a convention centre’s management in the US, high-lighting all the health and safety preparations being taken to protect visitors:

4. Consider setting up a hotline or special contact number for clients, vendors or other stakeholders to use in case they have questions about COVID-19 plans and preparations.

5. Consider a proactive mass media communications strategy in which you engage the local or national media to highlight preparations you are taking to mitigate risks at your venue and or events.

An example of a local TV news story prepared in collaboration with a convention centre’s management in the US, high-lighting all the health and safety preparations being taken to protect visitors:

Monitoring news about your facility, or the area / city around it specifically, is also one of the checks one can exercise on or against any inaccurate, misleading or other erroneous/’fake news’ that stands to impact your organization.

2. The premier global resource being used by convention and exhibition centres and most other business to track COVID-19 news is the combined WHO – Chinese CDC – US CDC – European CDC monitoring website tracking the outbreak on an ongoing basis.

https://gisanddata.maps.arcgis.com/apps/opsdashboard/index.html#/bda7594740fd40299423467b48eefec6

3. Both a global and a regional monitoring tool, the European CDC is also used as a vital daily resource by various centres.

4. Another global monitoring tool some centres use as a cross-check for other services is the privately owned (by Dadax corporation) ‘World-o-meter.’

https://www.worldometers.info/coronavirus/
Many convention and exhibition centres track their own nation’s national health agency page: more than four dozen countries’ health authorities are putting out daily updates on COVID-19 developments, from Italy and Singapore and Mexico to the US, Australia and Japan. Many of these now contain great levels of detail, link to other resources, and offer frequent updates on best practices in meeting COVID-19 challenges.

A growing number of Apps are being put on the market to help people track where cases are being reported. These include the Corona 100M App and the Corona Map App. Many Apps are thus far only available in particular countries.

Check if your country has specific health threat conditions or health alert levels at which authorities expect organizations to take certain measures. This both to ensure you are up to date and effective in the measures you take, and to ensure your organization’s compliance with local health safety rules and regulations. Example of the national ‘Disease Outbreak Response System Condition’ format used by the government of Singapore:

**Key Health & Safety Information Resources**

- **UFI resources on COVID-19**
  - Joint Meetings Industry Council (JMIC) | page on COVID-19
  - Singapore Ministry of Health | resources on COVID-19
  - World Health Organization (WHO) | main page on COVID-19
  - WHO | guidance on preparing your workplace for COVID-19
  - WHO | guidance for staff on how to prevent from getting themselves and others sick
  - British Government | guidance for employers and businesses
  - US Centers for Disease Control (CDC) | main page on COVID-19
  - US National Library of Medicine | on COVID-19 testing procedures
  - National Health Commission of China | updates on COVID-19 developments

**Key Industry Expertise Resources**

Select organizations that various AIPC and UFI members consult, belong to or that may otherwise serve as a useful resource for expertise applicable to managing the challenges posed by COVID-19 include:

- ASIS International
  - Disease Outbreak Security resources
- Fire and Life Safety Council
- Hospitality, Entertainment and Tourism Security Council
- Association of Event Venues (AEV)
- Business Continuity Institute (BCI)
- European Arena Association (EAA)
- European Major Exhibition Congress Association (EMECA)
- Event Safety Alliance (ESA)
- Exhibition and Event Association Australasia (EEAA)
- Exhibition Services & Contractors Association (ECSA)
- International Association of Exhibitions and Events (IAEE)
- International Association of Venue Managers (IAWM)
- National Arena Association (NAA) (UK)
- National Center for Spectator Sports Safety and Security (NCS4) (USA)
- National Institute of Standards and Technology (NIST) (US)
- Overseas Security Advisory Council (OSAC) (US)
- Risk and Insurance Management Society (RIMS)
- Sports Grounds Safety Authority (UK)
- Venue Management Association (Australia)

Guidance on Coronavirus (COVID-19)

Update information

Background information

Review here. In January 2020 the World Health Organization declared public health emergency of international concern under its response. The UK’s Chief Medical Officers declared the UK was at high risk on 31 January. The premises, government, and the health service to develop planning and preparation in the case of a more widespread outbreak. The risk remains low to the public.

The situation in Scotland - Coronavirus (COVID-19)

There is confirmed positive case in Scotland.

Symptoms

Three main symptoms reported by the World Health Organization (WHO) are:

- Fever, cough, or shortness of breath.

Personal hygiene – “Catch a Cold, Be Kind”!

There are a few key steps you can take to slow the spread of almost any virus, including coronavirus (COVID-19):

- Always carry tissues with you and keep them to catch your cough or sneeze.

- Cover your mouth.

- Wash your hands with soap and water, or use a sanitiser gel.

What we’re doing

The health and safety of our staff, clients, partners and the public are our number one priority. The Health and Safety team are monitoring daily updates and advice issued from the World Health Organization (WHO), UK Government, Scottish Government, NHS, and our local authority.

We require all members of our teams and anyone who supports them with this work, to:

- Wash their hands frequently and properly with soap and water or use a sanitiser gel.

Venue specific controls

Public areas

We’re displaying official messaging on screens and posters in public areas and ensuring washing facilities and soap and alcohol-based hand sanitiser are available.

Clerking

Our cleaning schedule is reinstated, and an enhanced schedule has been created to regularly (ideally) high-touch touch points should that risk time change. Our clerking team are ready to decontaminate any areas used to prevent the spread of infection.

Installations

The Medical portalisation innovation area is our dedicated isolation room an campus should we need to treat someone presenting with symptoms. Our medical team will take health precautions and inform the emergency services.

Partners and contractor controls

Our catering, cleaning, medical security partners, and suppliers who help us create a safe and enjoyable event experience, have robust policies for managing public health risks and liaise with the SEC, they are closely monitoring guidance provided by Government.

Event planning

The event team are monitoring all incoming events and communicating with clients in advance. Should any event be at risk of delay, we will liaise with our client to ensure we can mitigate any risks to the event’s success.

The World Health Organization (WHO) has provided useful guidance on how planning considerations for mass gatherings. While the WHO recommendation for mass gatherings may be on a much larger scale than our events, it contains very useful information that can be applied proportionately to our circumstances over three phases:

- Planning: Theological events (e.g. before the event begins), when operational plans for health and safety services during the event are developed, tested and refined.
- During the event: Once the event is on its feet and the delivery of the event services begins, and;
- Post-event: The period after the event finishes and participants returning to their home countries or regions are remaining the event delivery and any follow-up actions that are necessary.

It is also useful to consider in relation to Coronavirus and steps that may be taken to create an action plan and to help communicate relevant and useful information to those attending events.

Example of Policy Statement in the Form of a Guidance Document

The document can be accessed by clicking on the link:

https://www.scottishevents.com/services/safe-planning-recommendations-for-events-
modified-to-fit-the-context-of-covid-19-outbreak

We will of course be very happy to help you with this and provide the appropriate local and SEC specific information as we prepare our assessment and plan.

As we are aware of your event plans and the plan to support you further, we ask that you copy a risk assessment and action plan to share SEC during the planning stage of your event.

Any additional control measures emerging soon should be discussed at the planning stage with your SEC contact and we will support you to make them happen.

Recommendations for Travellers

The list of specified countries and areas with implications for travellers or visitors arriving in the UK has been updated and divided into two categories; these are:

- Category 1: Travellers of immediate self-isolation, even if they have no signs of symptoms and
- Category 2: Travellers who will undertake any specific measures, but if they develop symptoms, they should self-isolate and contact 111.

The guidance for help, information, and advice on Coronavirus (COVID-19) applies to individuals who return from these specific areas on or after 30 January 2020.

APPENDIX 2

Massachusetts Convention Center Authority Pandemic
Flu SOP Incident Response | Used with Permission

PURPOSE
Purpose of this SOP is to detail the response protocol to incidents involving a pandemic disease, communicable disease, EVD patient or at the Massachusetts Convention Center Authority Facilities.

Direct Reports
MCCA Public Safety Department

Coordinates With
MCCA Executive Staff
Emergency First Responders
Massachusetts Department of Public Health (MDPH)
Boston Public Health Department (BPHD)

BEIMS Incident Command

Pre-Event Actions:
- Review and become familiar with the MCCA Concept of Operations, this SOP, as well as other documentation.
- Attend annual refresher SOP training in order to become and remain familiar with the MCCA Concept of Operations as well as the responsibilities identified in the SOP for this position.
- Participate in scheduled drills and exercises.

Initial Actions:
- If an individual (patient) admits themselves to the first aid station, with flu -like symptoms, the Medical Personnel or Public Safety Supervisor will administer the CDC questionnaire:
  - If the patient answers “no” to all questions on the CDC questionnaire follow normal influenza procedures.
  - If the patient answers yes to a high-risk questions on the CDC questionnaire, perform the following:
    - Call 911 and Boston Public Health Department to inform them of the medical situation.
    - The Public Safety Supervisor and or Medical Personnel must immediately take extra precautions and use all appropriate PPE.
    - The Public Safety Supervisor and or Medical Personnel must isolate patient and secure the area until arrival of first responders.
    - The Public Safety Supervisor and or Medical Personnel will be responsible for gathering as much information from the patient (when they arrived on site, where they entered, where they went, who are they associated with)
    - All non-essential staff should be removed from the infected area.
    - Set up decontamination site outside nurses station.

Monitoring Actions:
- Tier 3 Notifications
- Maintain Communications with and provide all relevant information to Emergency First Responders
- On completion of contamination site, isolation area is declared "clear" by a higher ranking Medical Official.

1st Responder Response & Facility Access Requirements:
- Establish a designated staging location for 1st responders to arrive at and hold the staging/ingress area (i.e. Summer Street entrance)

Event Termination, Recovery, and Demobilization Actions:
- If serving as the Incident Commander (IC), perform the following actions:
  - Prepare a list of all persons that have been exposed to the patient for the Boston Public Health Dept.
  - Conduct formal briefing with Executive Staff as soon as possible after conclusion of event
  - Once cleared to do so, Emergency 1st Responders begin cleanup of affected areas
  - Complete After Action Report and submit to the Public Safety Department Chief.
